Decking over 240” is shown as one length and decking must be spliced - multiple lengths of decking may be estimated. The deck board lengths and/or quantities may need to be adjusted based on framing or the deck board splice pattern you prefer. Please review the deck board lengths and quantities prior to the start of your project. A divider board may be added to improve the look and eliminate splices. To add dividers, recall the design and add a divider on the Design>Decking tab in the program.

Menards Deck Building Checklist

Planning

1. Get a permit. Check restrictions, building codes or local zoning to make sure your design complies with all requirements.
2. Contact local utilities to ensure construction will not disturb any electrical, cable or plumbing.
3. If necessary, hire a professional to help with planning and construction.
4. Consider site conditions including soil type, grade, and runoff before finalizing your design.
5. For decks attached to a building the attachment is critical, the attachment may require additional hardware and/or framing material including additional material inside the building for proper attachment.
6. Material estimates provided can be changed to meet your needs.
7. Additional joist blocking and bracing may be required based on deck location, elevation, and deck board type.
8. Menards offers professional delivery of materials, delivery is extra based on the distance from your local Menards store to your building site.
9. Final deck design and material calculations should be performed by a registered professional engineer.

Construction

- Practice good safety habits, use PPE including eye protection & dust masks during construction
- The deck railing will provide both a finishing touch to your project and the required safety needed. Make sure to follow good building practice and all manufacturer's instructions.
- Use all the hardware and fasteners recommended.
- With treated material its recommended to seal and/or stain your deck as soon as the decking will absorb the sealant.

Enjoy!!!

The type and quantity of fasteners used to install MiTek products is critical to connector performance. MiTek has a full range of structurally-rated fasteners for wood frame structures. Hot-Dip Galvanized, Stainless Steel, EXT-Exterior Coating and Gold Coat corrosion resistant finishes are available for exterior applications.

MiTek Deck Hardware is available in Triple Zinc (TZ) and Gold Coat (GC).

TZ galvanizing provides a prefabrication coating of 1.85 (G-185) ounces of zinc per square foot of surface area (both sides) measured in accordance with ASTM A 653. Use with Hot-Dip Galvanized fasteners.

Gold Coat is a proprietary multi-layer protection system. It is comprised of an organic top coat barrier layer and a zinc layer placed over a steel substrate. Use with Gold Coat or Hot-Dip Galvanized fasteners.
